ABSTRACT

This project demonstrates building a survey app using Android's Jetpack Compose UI toolkit, aimed at providing hands-on experience in Compose-based UI design and database integration. Users register, log in, and answer survey questions, while administrators have access to view all data. The project workflow includes setting up the project in Android Studio, adding dependencies, creating database structures, building the app's UI, and configuring the `AndroidManifest.xml`. By completing this, developers will understand Compose UI fundamentals, data handling, and app structuring in Android, making it an ideal introduction to app development using modern Android tools and practices.

Description

This project involves creating a survey app using Android's Jetpack Compose UI toolkit. It enables users to register, log in, and answer survey questions, with their responses securely stored in a database. An admin interface allows administrators to view and manage the survey data.

Key Features:

- ▶ **User Registration & Login:** Users can create an account and log in to access the survey.
- ▶ **Survey Participation:** Users answer a series of questions, with responses stored in a database.
- ▶ **Admin Interface:** Admins can log in to view and manage all collected survey data.
- ▶ **Database Integration:** Secure data storage for survey responses.
- ▶ **UI Development:** Designed using Jetpack Compose for a modern and responsive user interface.
